

JON BUOY®

Inflatable Danbuoy

The Jonbuoy Inflatable Danbuoy is stylish, compact and weighs only 3.3kg. Designed as a direct replacement for the traditional danbuoy, light, whistle and drogue, it is available in either a black or white casing.

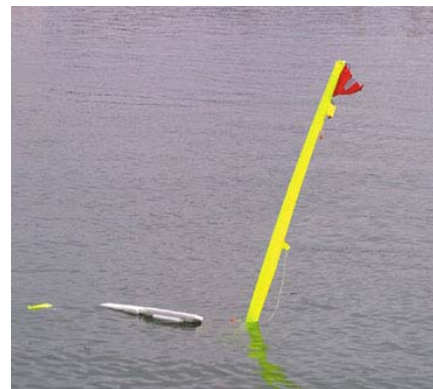

Unobtrusive, it is mounted on a vessel's pushpit in its own bracket and protective exterior.

Operation

In an emergency simply unclip the unit from its mounting bracket and throw the whole casing.

Once deployed into the water the highly fluorescent Danbuoy automatically inflates acting as an invaluable reference point for rescuers.

To prevent it from being blown away in adverse weather conditions the inflated Danbuoy is designed complete with a static line, lead ballast and drogue.

Once the casualty has been successfully recovered the Danbuoy can be re-packed with a new inflation cylinder.

A quick, simple and very effective alternative to the awkward and cumbersome flag pole MOB system.

Service Centres: Southampton Plymouth & Glasgow
